SVF Flow Controls Achieves SIL 3 Capable Certification for Key Valve and Actuator Products

La Palma, CA June 19, 2025 — SVF Flow Controls, a recognized leader in flow control technology for industrial process applications, proudly announces that several of its flagship products have achieved SIL 3 capable certification, a significant safety milestone in support of our customers operating in critical service environments.

The newly certified products include:

- **2-Way Floating Ball Valves:** B8, H7, R8, SB7, SB7F
- **3-Way Floating Ball Valves:** TSB7, TSB7F
- **Pneumatic Rack & Pinion Actuators:** AERO2, Quad4

SIL 3 or Safety Integrity Level 3, is a classification within the IEC 61508 standard for functional safety, indicating a high level of risk reduction performance required for a safety instrumented function (SIF). It represents a significant reduction in the probability of failure on demand, typically by a factor of 1,000 to 10,000. SIL 3 is one of four SIL levels, with SIL 1 being the lowest and SIL 4 the highest in terms of risk reduction. Achieving SIL 3 requires redundant components and robust diagnostic capabilities to minimize the likelihood of failure. SIL 3 certification requires third-party approval and auditing to verify their ability to meet the safety performance.

“This achievement is a testament to SVF’s commitment to engineering excellence and continuous improvement,” said Jay Saldana, VP of Engineering at SVF Flow Controls. “Our customers in industries such as chemical processing, energy, and high-purity applications now have additional assurance that our valves and actuators meet the most stringent safety and performance requirements.”

With SIL 3 capable certification, SVF joins an elite group of manufacturers whose products are proven suitable for demanding applications involving process isolation, emergency shutdown, and pressure relief. Customers can feel confident using SVF’s SIL 3 capable solutions knowing they are backed by trusted, third-party-verified components, providing added assurance for safety instrumented systems.

About SVF Flow Controls

SVF Flow Controls, a division of Matco-Norca, is a premier manufacturer of ball valves, actuators, and control accessories for industrial, high-purity, and process applications. Known for its engineering integrity, responsive service, and industry certifications, SVF supports a wide range of markets including chemical, pharmaceutical, biotech, food & beverage, oil & gas, and semiconductor.
